

PROLON TESTIMONIALS

Ted Hoffman, Sales Manager at Minvalco, Minneapolis, MN

"At Minvalco, we sell JACE controllers to our controls contractors, and Prolon controllers to our service contractors....over the counter!"

Gus Bauder, director of Building Automaton at Temperature Controls Systems, Dallas, TX

"Pro Lon at TCS is used in these basic applications:

Sold over the counter to service contractors;

Converting a standalone Pneumatic VAV or FPB to DDC with an open protocol controller that can be integrated to a full blown automation system.

Converting a third party standalone DDC controller such as an Enviro-Tech VAV or FPB, to a cost effective open protocol DDC controller.

Sold to mechanical or service contractors as an Automation startup system.

Inexpensive startup cost and little programing knowledge required.

Can graduate the contractor and jobs to a Niagara based multi campus advanced graphical interface project.

Currently in Texas, and I'm sure elsewhere, 80% of commercial buildings are Light Commercial applications consisting of Roof Top Units and VAV's.

Example: Churches, car dealerships, convenience stores, office warehouse, day care, small office building with 100 devices or less."

PROLON

ZONING SYSTEM - Because every zone is different !

Zoning solution for light commercial application

Are you in search of a reliable zoning control system for your service contractors which is as simple to configure as a programmable thermostat? Are your controls contractors asking you for a cost effective solution to be used in their light commercial building applications? Would you like to increase your revenues and expand your customer base, with little to no technical support required of your team, after just a single job? How about being able to offer your contractors the ability to buy systems over the counter, feeling totally comfortable in their ability to do any job using that system because they attended the FREE technical start-up training always available in house to valued distributors? Then Prolon is the solution for you!

With more than 1,000 projects in North America, Prolon is the effective solution for light commercial buildings:

- Bring automation of your VAV equipment to a simple and affordable level
- Comes with free software that provides a 3D visualization color of your system
- Provides convenient remote communication, even from your mobile phone
- Adaptable to existing systems as new systems

Please contact us to learn more about our products and how you can take advantage of the free training offered by Prolon to provide everything you need to be successful with our system!
